Problem Statement

Students are really anticipated for the chances of admission to reputed universities with their cut-offs. The aim of our project is to assist students in shortlisting universities with their details. The predicted output gives them a good idea about their possibilities of admission to a particular university. This would help students to determine whether their marks are suitable for admission.

Problems

- Do the data collected for training are error-free.
- Check for validity of prediction.
- Check for the eligibility of student admission.
- Does the webpage is user-friendly.
